Device deployment via the mobile app

The camera can be operated and configured through the companion app.

Users need to:

- Download the app
- see Connecting to the App section
- Set up the camera in the field - see Camera Setup section
- **Start deployment** via the app.
- Provide all required details, including:
 - Project name
 - Deployment name
 - Selecting an available device via Bluetooth connection
 - Specifying the location using latitude/longitude or the user's own location
 - Specifying whether user wants to use motion detection or time-lapse and picture quality
 - Viewing the camera feed by taking a test snapshot
 - Taking a picture of the camera itself and further describing the location
- **End the deployment** via clicking the 'End Deployment' button and selecting the deployment to be terminated
