Wildlife Watcher User Guide

From wildlife.ai
For Wildlife Watcher project

Start a deployment

1. Camera Deployments via the App

- The camera can be operated and configured through the companion app.
Users need to:
 - Download the app - see Connecting to the App section
 - Set up the camera in the field - see Camera Setup section
 - **Start deployment** via the app.
 - Provide all required details, including:
 - * Project name
 - * Deployment name
 - * Selecting an available device via Bluetooth connection
 - * Specifying the location using latitude/longitude or the user's own location
 - * Specifying whether user wants to use motion detection or time-lapse and picture quality
 - * Viewing the camera feed by taking a test snapshot
 - * Taking a picture of the camera itself and further describing the location

2. End the deployment

by clicking the 'End Deployment' button and selecting the deployment to be terminated.
