5. Start a deployment

1. Camera Deployments via the App

- The camera can be operated and configured through the companion app. Users need to:
  - Download the app - see Connecting to the App section
  - Set up the camera in the field - see Camera Setup section
  - **Start deployment** via the app.
  - Provide all required details, including:
    * Project name
    * Deployment name
    * Selecting an available device via Bluetooth connection
    * Specifying the location using latitude/longitude or the user's own location
    * Specifying whether user wants to use motion detection or time-lapse and picture quality
    * Viewing the camera feed by taking a test snapshot
    * Taking a picture of the camera itself and further describing the location

2. End the deployment

by clicking the 'End Deployment' button and selecting the deployment to be terminated.
